

Comp2151 Agile Software Development

Group Project Sprint-2

Due date: Sunday Dec 9, 2018

Submission: One member from each group will submit **online through blackboard**
(One file MS Word or Pdf)

Create a user interface in terms of web pages for the Clinical Management System case study.

Create sufficient number of screen shots to capture the entire functionality of the system and it should be able to implement every user story and all required business processes of the system under design

To the end user the user interface is the software system itself, therefore the User Interface design should be started early on and be used to present to the client, get her feedback and iteratively grow and improve functionality.

User Interface Design defines how the system will interact with its potential users and is a very critical and important aspect of software system design.

You may use any software to create **wireframes** (Moqup, Mockflow etc).

A wire-frame is a visual guide that represents the skeletal framework of a website.

Copy all screen shots in a Word document (or pdf) and submit on BlackBoard.
